

State Personal Income, Revised Estimates for 1982–97

By Wallace K. Bailey

THIS ARTICLE presents the revised annual estimates of State personal income for 1982–97. These estimates provide State-by-State information on personal income and disposable personal income, including per capita measures and information on the sources of personal income.

This annual revision of the estimates of State personal income incorporates the estimates of personal income from the annual revision of the national income and product accounts (NIPA's) that was released in July 1998. For 1995–97, the revision to the NIPA's reflected the use of new source data and other statistical changes.¹ In addition, the national estimates of personal dividend income for 1982–97 were redefined to exclude capital gains distributions of regulated investment companies—that is, mutual funds.²

1. For a description of the NIPA revision, see Eugene P. Seskin, "Annual Revision of the National Income and Product Accounts," SURVEY OF CURRENT BUSINESS 78 (August 1998): 7–32.

2. As a result of this redefinition, all identifiable forms of capital gains and losses have been excluded from personal income. For a more detailed description of this redefinition and its effect on other NIPA components, see Seskin, "Annual Revision," 29.

The revisions of the national estimates of personal income were –0.7 percent for 1993 and –0.6 percent for 1994, reflecting the large downward revisions to personal dividend income. For 1995–97, the revisions to personal income ranged from –1.1 percent to –1.3 percent, reflecting the large downward revisions to personal dividend income and substantial downward revisions to other labor income and to personal interest income.

This article describes the sources and effects of the revisions, discusses the revised estimates of change in personal income and per capita personal income for 1997, and provides the definitions of the major personal income aggregates. Tables 1–4 at the end of the article present the revised estimates of personal income and per capita personal income and of disposable personal income and per capita disposable personal income for 1992–97, and table 5 presents the revised estimates of personal income by component and of earnings by industry for 1995–97. (For information on the revised estimates for earlier years, see the box "Data Availability" on page 22.)

Acknowledgments

The revised estimates of State personal income were prepared by the Regional Economic Measurement Division under the direction of Robert L. Brown, Chief. Hugh W. Knox, Associate Director for Regional Economics, provided general guidance.

Estimates of nonfarm wages and salaries and other labor income and of personal tax and nontax payments were prepared by the Regional Wage Branch under the supervision of Sharon C. Carnevale, Chief. Major responsibilities were assigned to Elizabeth P. Cologer, Lisa C. Ninomiya, Michael G. Pilot, John A. Rusinko, and James M. Scott. Contributing staff members were Susan P. Den Herder, Ann E. Dunbar, Lisa B. Emerson, John D. Laffman, Lela S. Lester, Russell C. Lusher, Richard A. Lutyk, Paul K. Medzerian, Mauricio Ortiz, Michael Phillips, Adrienne T. Pilot, William E. Reid, Jr., Victor A. Sahadachny, Elizabeth F. Stell, and Jaime Zenzano.

Estimates of farm wages and salaries and other labor income and of proprietors' income, property income, transfer payments, personal contributions for social insurance, and the adjustment for residence were prepared by the Regional Income Branch. Major responsibilities were assigned to Charles A. Jolley and James M. Zavrel. Contributing staff members were Elaine M. Briccetti, Carrie L. Case, Daniel R. Corrin, Toan A. Ly, W. Tim McKeel, Jeffrey L. Newman, Suet M. Ng, James P. Stehle, Ellen M. Wright, and Marianne A. Ziver.

The public use tabulations and data files were assembled and the tables for this article were prepared by the Regional Economic Information System Branch. Major responsibilities were assigned to Kathy A. Albetski and Gary V. Kennedy. Contributing staff members were H. Steven Dolan, Michael J. Paris, Albert Silverman, Nancy E. Smith, Callan S. Swenson, Monique B. Tyes, and Mary C. Williams.

Sources of the revisions to the State estimates

The revised estimates of State personal income incorporate the revised NIPA estimates through the use of the national estimates of more than 400 subcomponents as control totals for the State estimates. The revised State estimates also incorporate newly available State-level source data that are more current, more detailed, and otherwise more appropriate than the source data they replace. In addition, the estimates of non-farm proprietors' income incorporate a change in methodology.

Newly available State-level source data.—The State estimates of wage and salary disbursements, other labor income, and personal contributions for social insurance for 1997 incorporate newly available tabulations from the Bureau of Labor Statistics (BLS) of wages and salaries of employees covered by State unemployment insurance (UI) for the fourth quarter of 1997 and revised tab-

ulations for the previous quarters. Previously, the estimates for 1997 reflected UI data for the first three quarters and extrapolations for the fourth quarter that were based on data from BLS's monthly Current Employment Survey.

For farm proprietors' income, the estimates incorporate revised national and State estimates of farm income for 1995–96 from the U.S. Department of Agriculture (USDA) and new USDA estimates of farm income for 1997.

For dividends, interest, and rent, the estimates incorporate newly available tabulations from the Internal Revenue Service (IRS) of individual income tax returns for 1996. Previously, the 1996–97 estimates were based on extrapolations of tabulations for 1995; the 1997 estimates are now based on extrapolations of the tabulations for 1996.

For transfer payments, the estimates incorporate newly available tabulations for 1997 of the benefits disbursed from the agencies that

Relation of Personal Income in the National Income and Product Accounts (NIPA's) and in the State Personal Income Series

The level of the annual estimates of personal income in the NIPA's differs from that of the national totals of State personal income because of differences in coverage, in the methodologies used to produce the estimates, and in the timing of the availability of the source data. The table below shows the relation of the NIPA estimates and the State estimates of personal income by component and by source of difference; almost all of the difference is accounted for by the estimates of net earnings.

The largest source of difference is the overseas adjustment, which excludes the earnings of Federal civilian and military personnel stationed abroad and of certain employees of U.S. corporations on temporary foreign assignment from the State estimates. In the NIPA's, personal income is a measure of the income of U.S. residents and thus includes the income of some U.S. residents who are living

abroad temporarily. In the State estimates, the national total of personal income is a measure of the income of the residents of the 50 States and of the District of Columbia, and the place of residence is the State in which they live currently. This difference affects the estimates of wage and salary disbursements, of other labor income, and of personal contributions for social insurance.

The next largest source of difference between the two series is a difference in the methodologies used to estimate farm proprietor's income. For both series, the estimates of farm proprietors' income are derived from U.S. Department of Agriculture (USDA) estimates of net farm income, but the methodologies used for the derivation differ. For the NIPA's, data from the Internal Revenue Service on the income of farm corporations are subtracted from the USDA estimates of net farm income in order to derive farm proprietors' income. For the State series, the USDA estimates of farm gross income and expenses are disaggregated into corporate and noncorporate portions in proportion to establishment data from the Census of Agriculture. A portion of the differing results of the two methodologies is attributable to the use of data for enterprises—farm corporations—in the NIPA methodology and for establishments—corporate farms—in the State methodology.

The two series also differ because of differences in the timing of the availability of source data. These differences are highly variable and are usually relatively small. Specifically, revised wage and salary data from the Bureau of Labor Statistics and revised USDA estimates of net farm income sometimes become available after the NIPA estimates have been prepared but in time to be incorporated into the State estimates.

Finally, a small difference between the two series is due to a coverage adjustment to the NIPA estimate of transfer payments. In the State series, this adjustment removes the unemployment benefits paid by State employment security agencies to individuals living in the outlying U.S. areas, mainly in Puerto Rico.

1. Net earnings is the sum of wage and salary disbursements, other labor income, and proprietors' income, less personal contributions for social insurance.

administer the benefit programs, such as the Social Security Administration for benefits under the social security retirement and supplemental security income programs and the Health Care Financing Administration for benefits under the medicare and medicaid programs. Previously, the estimates for 1997 for these benefits and for most other subcomponents of transfer payments were based on extrapolations of tabulations for 1996; tabulations for 1997 were available only for unemployment compensation.

Methodological change.—For nonfarm proprietors' income, the methodology used to prepare the estimates for 1995 was changed because tabulations from the 1995 income tax returns of sole proprietors and partnerships were not available from the IRS in time to be used for the estimates. Instead, the estimates are based on extrapolations of the 1994 tabulations by the relative change in the number of small establishments in each industry from the Census Bureau's annual *County Business Patterns*. In accordance with the established methodology, the revised estimates for 1996–97 are based on extrapolations of the 1995 estimates by the relative change in the pre-revision estimates of nonfarm State personal income.

Effects of the revisions on the State estimates

This section describes the effects of the revisions on the State estimates for 1994–97, on the average annual rates of change in the estimates from 1994 to 1997, and on the levels and ranks of the estimates of per capita personal income for 1997. Although the series reflects moderate downward revisions to the estimates for most States, the major comparative features of the series—including the relative rates of change among the States and the rankings of State per capita personal income—changed little.

Revisions to the estimates for 1994–97.—The revisions to the estimates for the States and BEA regions generally reflect the downward revisions to the national estimates (table A). For 1994, the only component of personal income for which the national estimate was revised was personal dividend income. The variation in the percent revisions among the States and regions reflects only the variation in the relative proportions of dividends to personal income.

For 1995 and for 1996, the national estimates of all of the components of personal income were revised, and new State-level source data were used for many of the components. The

Data Availability

This article presents a summary of the estimates of personal income, per capita personal income, disposable personal income, and per capita disposable personal income for 1992–97 and estimates of personal income by major source and earnings by industry for 1995–97. These estimates, together with more detailed and supplemental estimates, are on the newly available CD-ROM "State Personal Income, 1929–97" (price \$35.00, product number RCN-0208). This CD-ROM also includes gross state product for 1977–96 and the methodology used to prepare the estimates of State personal income. To order the CD-ROM using Visa or MasterCard, call the BEA Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666). To order by mail, send a check made payable to "Bureau of Economic Analysis, BE-53" to BEA Order Desk, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

These estimates are also available on BEA's Web site; go to <www.bea.doc.gov>, and click on Regional, Data, Recent annual tables. The estimates are organized into the following sets of files.

- Personal income, per capita personal income, disposable personal income, per capita disposable personal income, and population for 1929–57 and for 1958–97
- Personal income by major source and earnings by Standard Industrial Classification (SIC) two-digit industry for 1958–68 and for 1969–97

- Personal income by major source and earnings by SIC division (the "one-digit" level of classification) for 1929–57

- Wage and salary disbursements by SIC two-digit industry for 1958–68 and for 1969–97

- Wage and salary disbursements by SIC division for 1929–57

- Economic profiles that include a selection of data from several of the other tables and component detail for dividends, interest, and rent for 1958–68 and for 1969–97

- Transfer payments by major program for 1948–57, for 1958–68, and for 1969–97

- Farm income and expenses that include the major categories of gross receipts and expenses for all farms and four measures of farm income for 1969–97

- Personal tax and nontax payments by level of government and by type for 1948–57, for 1958–68, and for 1969–97

- Employment by type and by SIC two-digit industry for 1969–97

- Wage and salary employment by SIC two-digit industry for 1969–97

For more information about these estimates, call BEA's Regional Economic Information System at 202-606-5360, fax 202-606-5322, or E-mail <reis.remd@bea.doc.gov>.

percent revisions for the States and regions do not vary greatly from the percent revisions to the national estimates. The estimates for all States and regions—like the national estimates—were revised down, and the only percent revision that deviates by 1 percentage point or more from the national revision is the downward revision of 2.4 percent for Michigan in 1996.

For 1997, the national estimates of all of the components of personal income were revised,

and new State-level source data were used for most of the components. The percent revisions to personal income for the States and regions show more variation for 1997 than for the previous years. In six States, the percent revisions deviate by 1 percentage point or more from the 1.2-percent downward revision to the national estimate (table B). The estimates for Arkansas and Iowa were revised up, the estimates for Texas, Colorado, and Wyoming were revised

1. Revision as a percentage of the previously published estimate.

down much less than the national estimate, and the estimate for Michigan was revised down substantially more than the national estimate.

For Arkansas and Iowa, the upward revisions to personal income reflect upward revisions to several components of personal income, especially to farm proprietors' income, that more than offset the downward revisions to dividends, interest, and rent. For Texas the downward revision to dividends, interest, and rent is more than offset by an upward revision to nonfarm proprietors' income.

For Colorado and Wyoming, the downward revisions to dividends, interest, and rent are largely offset by upward revisions to nonfarm proprietors' income and to wages and salaries in both States and to transfer payments in Colorado.

For Michigan, the 2.2-percent downward revision is attributable to a large downward revision to other labor income, which resulted from a sharp downward revision to the national estimate of that component for the motor vehicle manufacturing industry, and to the downward revision to dividends, interest, and rent.³

Rewvisions to the rates of change for 1994–97.—The revisions to the average annual rates of change of personal income from 1994 to 1997 for the BEA regions and the States were generally close to the downward revision of 0.2 percentage point to the national estimate (table C). The Rocky Mountain region was the only region with an upward revision to its personal income rate of change. Arkansas, Iowa, and Wyoming are the only States with upward revisions of more than 0.2 percentage point, and Michigan is the only State with a downward revision of more than 0.5 percentage point.

3. The downward revision to other labor income was mostly accounted for by a revision to employer contributions for private pension and profit-sharing plans. For further information, see Seskin, "Annual Revision," 19.

The four States with the highest rates of change before the revisions—Nevada, Arizona, Utah, and Colorado—continue to have the four highest rates; Texas replaces Oregon as the State with the fifth highest rate of change. The four States with the lowest rates of change before the revisions—Hawaii, Alaska, West Virginia, and North Dakota—continue to have the four lowest rates; Michigan and Indiana replace Rhode Island and Wyoming as the States with the fifth lowest rates of change.

Rewvisions to per capita personal income for 1997.

—Because the estimates of population that are used to calculate per capita personal income have not been revised, the revisions to per capita personal income are in proportion to the revisions to personal income. The revisions did not affect the rankings of most of the States (table D). The rank of only five States changed by more than one position: Iowa and Rhode Island are each two positions higher, and Minnesota, Pennsylvania, and Vermont are each two positions lower.

After the revisions, the nine States with the highest ranks are the same as those before the revisions, but Maryland and Delaware exchange fifth and sixth places; Nevada replaces Minnesota as the tenth highest. The nine States with the lowest ranks are the same, but several of these States have changed ranks; Louisiana replaces Kentucky as the tenth lowest.

Changes in personal income in 1997

U.S. personal income increased \$362.0 billion, or 5.6 percent in 1997 after increasing 5.8 percent in 1996 (table 1). The largest increases were in the Southeast and Far West regions; although the rate of increase slowed in both of these regions, the Southeast region accounted for 22 percent of the increase in U.S. personal income, and the Far West region accounted for 19 percent. The

Table B.—Rewvisions to Personal Income for Selected States by Major Component for 1997

Wyoming	-2	.5	-.2	0	.6	-1.0	0	.1	0

1. Wage and salary disbursements, other labor income (OLI), and personal contributions for social insurance by employees, which account for most of the total contributions, are estimated by place of work. For the derivation of personal income, the net sum of these components (wages plus OLI less contributions) is converted to a place-of-residence basis through the addition of the adjustment for residence, which is not calculated for each component. The other components of personal income are estimated by place of residence.

2. The revisions to the adjustment for residence reflect the revisions to the estimates of wage and salary disbursements, other labor income, and personal contributions for social insurance by employees.

NOTE.—The revisions to the estimates of personal income for these States differ from the revision to the national estimate by 1.0 percentage point or more.

increase in the Southeast region was largely accounted for by Florida, North Carolina, Georgia, and Virginia, and that in the Far West region, by California.

Among States, California accounted for 13 percent—the largest share—of the increase in U.S. personal income in 1997; it has accounted for the largest share since 1995. Texas accounted for 10 percent—the second largest share—of the increase in U.S. personal income in 1997, up from

an 8-percent share in 1993; it has accounted for the second largest share since 1993.

Rates of change in per capita personal income in 1997

States with the largest increases.—In 1997, the five States with the largest percentage increases in per capita personal income were Connecticut (6.3 percent), Texas (6.1 percent), Washington (5.8 percent), Kentucky (5.8 percent), and

Massachusetts (5.6 percent). Of these States, Connecticut, Massachusetts, and Washington had per capita personal incomes that were above the U.S. average of \$25,298 (table D).

In all five States, the rates of increase in personal income were above the U.S. average of 5.6 percent, and except in Texas and Washington, the rates of increase in population were below the U.S. average of 0.9 percent (chart 1).

In all five States, net earnings by place of residence was the major contributor to the in-

crease in personal income. In Kentucky, transfer payments also contributed substantially.

By industry, in all five States, earnings in services and in manufacturing were the largest contributors to the increase in earnings by place of work. In addition, earnings increased rapidly in finance, insurance, and real estate and in wholesale trade in Connecticut; in wholesale trade and farms in Texas; in transportation and public utilities in Washington; in farms and construction in Kentucky; and in farms and in finance, insurance, and real estate in Massachusetts.

States with decreases or with the smallest increases.

—In 1997, the six States with decreases or with the smallest percentage increases in per capita personal income were North Dakota (−0.5 percent), Hawaii (2.3 percent), Alaska (2.6 percent), Nevada (2.6 percent), South Dakota (3.3 percent), and Nebraska (3.3 percent). Of these States, North Dakota, Alaska, South Dakota, and Nebraska had per capita personal incomes that were below the U.S. average.

In all these States except Nevada, the increase in personal income was less than the U.S. average. In Nevada, the small increase in per capita personal income reflected a large increase in population that largely offset the above-average increase in personal income (chart 1).

In all the States except Nevada, the increase in personal income was damped by a decline or by small increases in net earnings by place of residence.

By industry, large declines in farm earnings—from unusually high levels in 1996—contributed to the decrease or small increases in earnings in North Dakota, South Dakota, and Nebraska. Increases in earnings were damped by a decline in construction in Hawaii and by declines in mining and manufacturing in Alaska.

Definitions of personal income, disposable personal income, and earnings

Personal income is the income received by persons from participation in production, from government and business transfer payments, and from government interest. "Persons" consists of individuals, nonprofit institutions that primarily serve individuals, private noninsured welfare funds, and private trust funds.

Personal income is the sum of wage and salary disbursements, other labor income, proprietors' income, rental income of persons, personal dividend income, personal interest income,

CHART 1

States with the Fastest and Slowest Growth in Per Capita Personal Income, 1997

and transfer payments to persons, less personal contributions for social insurance.

State per capita personal income is calculated as the personal income of the residents of a State divided by the resident population of the State on July 1.

Disposable personal income is the portion of personal income that is available to persons for spending or saving; it is calculated as personal income less personal tax and nontax payments. Personal tax and nontax payments is tax payments (net of refunds) by a State's residents that are not chargeable to business expense and certain other payments to government agencies (except government enterprises) that are treated like taxes. Personal taxes includes taxes on income, including realized net capital gains; on

transfers of estates and gifts; and on personal property. Nontaxes includes donations and fees, fines, and forfeitures.

State per capita disposable personal income is calculated as the disposable personal income of the residents of a State divided by the resident population of the State on July 1.

In the State personal income series, earnings is the sum of wages and salaries, other labor income, and proprietors' income; it is estimated on a place-of-work basis and is available by industry. Net earnings by place of residence—which is not available by industry—is earnings less personal contributions for social insurance plus the adjustment for residence (the net inflow of the earnings of interstate commuters).

Tables 1 through 5 follow. 

Publication and Revision Schedules for the State and Local Area Estimates

Publication schedule.—The quarterly State estimates of total and non-farm personal income are published in the February, May, August, and November issues of the SURVEY OF CURRENT BUSINESS.

The preliminary annual State estimates of total and per capita personal income and of total and per capita disposable personal income are published in the May SURVEY. The revised annual estimates of State personal income by major type and of earnings by industry are published in the September or October SURVEY.

The local area estimates of total and per capita personal income, which are prepared annually, are published in the May SURVEY.

Preparation and revision schedule.—The quarterly estimates of State personal income are prepared about 4 months after the end of the quarter. The preliminary annual State estimates are prepared about 4 months after the end of the year, and the revised State estimates are prepared about 8 months after the end of the year. The annual estimates of local area personal income are prepared about 16 months after the end of the year.

In January, the estimates of State personal income for the third quarter of the previous year are prepared, and the estimates of the first and second quarters are revised.

In April, the annual and quarterly State estimates for the 3 years before the previous year are revised in order to incorporate the newly available data for wages and salaries that are used to prepare the county estimates for those years and to reflect the county-level estimation of the adjustment for residence. In addition, the State estimates for the fourth quarter of the previous year are prepared, and the estimates for the first three quarters are revised. Further, the

preliminary annual State estimates for the previous year are prepared by averaging the quarterly estimates for the year.

In May, the estimates of local area personal income for the year before the previous year are prepared, and the estimates for the 2 years before that are revised.

In July, the State estimates for the first quarter of the year are prepared, and the estimates for the four quarters of the previous year are revised.

In August or September, the annual State estimates for the previous year are revised through the use of the annual, rather than the quarterly, methodology, and the annual estimates for the 2 years before that are revised.

In October, the State estimates for the second quarter of the year are prepared and the estimates for the first quarter are revised. Further, the estimates for the quarters of the previous 3 years are revised for consistency with the revised annual estimates that were released in August or September.

The State and local area estimates are normally revised again only after a comprehensive, or benchmark, revision of the national income and product accounts (NIPA's) to reflect the revisions to the national estimates of personal income, which is an aggregate in the NIPA's; comprehensive revisions of the NIPA's are made approximately every 5 years, most recently in 1996. The revised national estimates are incorporated into the State and county estimates as part of comprehensive revisions of the State estimates and of the local area estimates. The most recent comprehensive revision of State personal income was released in 1996, and that of local area personal income, in 1997.

^r Revised.

1. The personal income level shown for the United States is derived as the sum of the State estimates; it differs from the national income and product accounts estimate of personal income.

For more information, see the box "Relation of Personal Income in the National Income and Product Accounts (NIPA's) and in State Personal Income."

2. Percent change was calculated from unrounded data.

Table 2.—Per Capita Personal Income by State and Region, 1992–97

SURVEY OF CURRENT BUSINESS

October 1998 • 41

and Earnings by Industry¹, 1995–97—Continued
[of dollars]

5. The adjustment for residence is the net inflow of the earnings of interstate commuters. For the United States, it consists of adjustments for border workers and for certain temporary and migratory workers. Wage and salary disbursements to U.S. residents commuting or working temporarily outside U.S. borders less wage and salary disbursements to foreign residents committing themselves temporarily in the U.S. border areas.

6. Rental income of persons includes the capital consumption adjustment.

7. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

⁸ "Other" consists of the wage and salary disbursements of U.S. residents employed by international organizations.
